

VirtueMart Catalog iPad Edition

Still trying to get customers to go to your VirtueMart webshop? Why don't you enter this millennium?

With the VirtueMart Catalog iPad Edition your customers can browse your webshop offline on their iPad.

How does this work?

It's easy. We will develop an iPad application for you and submit it to the AppStore of Apple. Everybody will be able to download this app for free and install it on his or her iPad. We'll also give you a Joomla Component to install on your system. This component will create the iPad support files with all your products and their thumbnails. When the iPad has a Wi-Fi connection, the app will update the files if needed.

Personalized

In order to customize the iPad app for you personally you need to supply the splash screen and the icon. Besides that you can choose from the different color themes we've created. If you own an iPad and give us the serial number, we'll send you the finished app to try.

Currently the iPad app is localized in Dutch and English, but we've a language file that's easy to edit. If you translate it into your local language, we'll add it.

Want to see the app in action first?

Just check out the free apps we've already created. [MEN at ART](#)
